

APPLIED AI END-TERM PROJRCT

○ **Title of the project:** Memes Generator with Captions

○ **Problem statement:** Design and develop an interactive web-based application that enables users to create customized memes using two images and personalized captions, addressing the need for a user-friendly and efficient meme generation tool.

○ **Proposed solution:**

- Implement image processing capabilities using Pillow.
- Create an interactive interface using ipywidgets.
- Use Matplotlib for image display and preview.
- Develop a Google Colab-based application using Python and relevant libraries.

○ **Technologies to be used:**

1. Programming Language: Python
2. Libraries:
 - Pillow (PIL) for image processing
 - ipywidgets for creating interactive interfaces
 - Matplotlib for image display and preview
3. Platform: Google Colab
